

Vital Blue

Protection with Indication

A Product Of Canada

Live Virus
Vaccine Stabilizer

Vital Blue

Protection with Indication

Stabilizer with dye for poultry vaccine feeding

For manual & automatic water nipple drinking lines

DESCRIPTION:

During the administration of live virus vaccines in poultry and livestock, the mineral contents of tap water and chlorine (if water is chlorinated) badly effect the live vaccine virus and minimize its titer which leads to the vaccine failure. To protect the viruses in this environment of diluted vaccine it is compulsory to add "vaccine stabilizer" in water or vaccine solution.

ADVANTAGES:

"Vital Blue" is a powder which reduces negative effects of tap water, visualizes the flow of water in automatic drinking lines of environment controlled houses and ensures each bird's drinking.

"Vital Blue" is a "Patent" (group of organic compounds) working synergistically to protect the vaccine virus in drinking water administration.

"Vital Blue" is specially designed to provide indication of quality vaccination as after drinking, it's blue mark on chicken beak, tongue and feathers ensure quality vaccination.

DIRECTIONS:

Dissolve "Vital Blue" into drinking water in a concentration of 1 gram per 8 liters. For stock solutions increase concentration according to the dosing level pump, 25 gram for 200 liters of water.

IMPORTANT INSTRUCTIONS:

1. Dissolve measured quantity of "Vital Blue" in 2-4 liters of drinking water.
2. Put the all required vaccine into this solution and mix properly, this mixing will bind the stabilizer with the vaccine virus ensuring its titer stability in diluted vaccine during vaccination.
3. Mix this stock solution in full calculated quantity of drinking water.
4. This mixture is ready for vaccination.

CAUTION:

Not for the treatment of any disease. Store at room temperature, not intended for spray, aerosol, eye drop, or injectable application.

SAFETY PRECAUTIONS:

For poultry use only, keep out of the reach of children. Not intended for human consumption.

PRESENTATION:

75 & 150gms zipper pouch.

خصوصیات:

واٹھیٹل پلیٹیو پولٹری لائیو ویکسین پلانے کے لیے بہترین سٹیبلایزر ہے۔

واٹھیٹل پلیٹیو ایک اعلیٰ اور وسیع الائر پولٹری ویکسین سٹیبلایزر ہے۔

واٹھیٹل پلیٹیو پانی میں ویکسین وائرس کی کوائٹی کو بہتر رکھتا ہے۔

واٹھیٹل پلیٹیو میں موجود نیلا رنگ ویکسین پینے کے دوران پولٹری برڈز

کے منہ، زبان اور پردوں کو لگ جاتا ہے جس سے ویکسین پلانے کی کوائٹی کنٹرول کرنے میں مدد دیتی ہے۔

خوراک:

ایک گرام 8 لیٹر پانی میں ملائیں۔

ضروری ہدایات:

1- سب سے پہلے واٹھیٹل پلیٹیو کی مقررہ مقدار کو 2 سے 4 لیٹر پانی میں ملائیں۔

2- اس کے بعد مقررہ ویکسین کو اس سلیوشن میں اچھی طرح سے مکس کریں،

تا کہ سٹیبلایزر ویکسین وائرس سے مل کر اس کو محفوظ کر لے۔

3- پھر اس سٹاک سلیوشن کو مقررہ مقدار کے زیادہ پانی میں ملا کر پولٹری برڈز کو پلائیں۔
